I think the Amiga version of this was absolutely stunning. Playing with a mouse was really more fun and it felt fast and natural. I don't think I own a copy to check whether my memory is correct. (It might be on one of my emulator CDs though.)

Axis-Praxis @axis_praxis · 3. Nov.

NEW VARFONT: Normschrift by @jenskutilek is a engineer's stencil font, its specimen makes superb use of custom CSS axis-praxis.org/specimens/norm...

"Normschrift" — the sound of this word drove many an apprentice draftsman to despair.

In the good old days before computers, draftsmen and draftswomen wearing white smocks worked on big drawing boards with Rapidograph pens. The pens were hell to keep clean and in working condition, as the ink tended to clog up the delicate mechanism when it dried.

Apprentices had a hard time learning a standard lettering style colloquially called "Normschrift" — "standard writing". As Germans like their cryptic & important-sounding code names, the official name was "DIN 6776" in the west, and "TGL-16/17" in the east. The typical orange stencils were cumbersome to use, so you really had to learn to write this style freehand. Apprentices had to keep a report note book and were also graded on how well they could write Normschrift.

Later this lettering style became an international standard, ISO 3098, but since the advent of computers it gradually fell out of use, and today mostly system fonts are used for CAD drawings.

Jens Kutílek produced an implementation of this lettering style, following the ISO standard loosely. The engineers who invented Normschrift knew nothing about proper letter spacing.

Using ProTube you can play a video in 4k and then AirPlay it to an Apple TV and it uses h.264. This is just part of Google's codec war, trying to force VP9 on everybody. Too bad Google killed ProTube :(

Jonas Gessner @JonasGessner

There are many news articles saying that Apple TV 4k can't play 4k YouTube videos because it does not support the VP9 codec. YouTube 4k videos also exist as h.264 streams so they can be played. The actual reason is that YouTube has not updated their app to play h.264 4k videos.

High praise from @espiekermann for my FF Hertz typeface in this @typejournalru interview :) typejournal.ru/en/articles/An...

Have you been surprised by any typeface recently, saying, “Wow, that’s amazing work”?

Oh, yes. There’s always something. Our favourites for a while were *FF Franziska* by Jakob Runge—it is just fantastic—and *FF Hertz* by Jens Kutílek. They have a little different approach. FF Franziska looks like a 1920s newspaper typeface, but it has a little edge to it and FF Hertz also looks like an old-fashioned typeface, but it works perfectly on low-resolution screens, as well as in Riso printing. There is a long list and every year we find something unusual. There are not so many models, but if you look at the whole picture, I’m always surprised that so much is going on and so many new faces are appearing.

Stultifyingly Mediocre Output @MrKenShabby · 23. Mai

This truly wonderful Roger story from @marchaynes is soothing my aching soul. 🥲

As an seven year old in about 1983, in the days before First Class Lounges at airports, I was with my grandad in Nice Airport and saw Roger Moore sitting at the departure gate, reading a paper. I told my granddad I'd just seen James Bond and asked if we could go over so I could get his autograph. My grandad had no idea who James Bond or Roger Moore were, so we walked over and he popped me in front of Roger Moore, with the words "my grandson says you're famous. Can you sign this?"

As charming as you'd expect, Roger asks my name and duly signs the back of my plane ticket, a fulsome note full of best wishes. I'm ecstatic, but as we head back to our seats, I glance down at the signature. It's hard to decipher it but it definitely doesn't say 'James Bond'. My grandad looks at it, half figures out it says 'Roger Moore' - I have absolutely no idea who that is, and my hearts sinks. I tell my grandad he's signed it wrong, that he's put someone else's name - so my grandad heads back to Roger Moore, holding the ticket which he's only just signed.

I remember staying by our seats and my grandad saying "he says you've signed the wrong name. He says your name is James Bond." Roger Moore's face crinkled up with realisation and he beckoned me over. When I was by his knee, he leant over, looked from side to side, raised an eyebrow and in a hushed voice said to me, "I have to sign my name as 'Roger Moore' because otherwise...Blofeld might find out I was here." He asked me not to tell anyone that I'd just seen James Bond, and he thanked me for keeping his secret. I went back to our seats, my nerves absolutely jangling with delight. My grandad asked me if he'd signed 'James Bond.' No, I said. I'd got it wrong. I was working with James Bond now.

any years later, I was working as a scriptwriter c UNICEF, and Roger Moore was doing a piece to idor. He was completely lovely and while the car p, I told him in passing the story of when I met h -le was happy to hear it, and he had a chuckle a number but I'm glad you got to meet James Bon

It's so freaking bad ass when something like this happens. Question asked (on FB Commodore Amiga Group) and [@DaveHaynie](#) drops a comment.

Dennis English ► **Commodore Amiga**

May 21 at 4:41pm · 🌐

What year did your Amiga cease to be your primary computer? For me, not sure exact year but it was around 2001/2 when I bought a Windows laptop.

Dave Haynie Pretty much happened, gradually, after I left Commodore. I was doing startup companies, so that meant affordable PCs for much of the work, no more workstations. Scala tragically insisted on using MS-Word for all documents, so I had Word on a 150MHz PC going slower than PageStream on my A3000 or for that matter, Omniwriter on my C128. Splitting work between office and home meant having a PC at home as well, and over time, less other stuff. Though in this photo, it's actually BeOS on-screen. Back in 1995-1996 I had the A3000, the BeBox, a generic home made PC, and a Motorola StarMax running AIX, all on the same KVM switch...

Remembering The Challenger Disaster

January 28th marked the 30th anniversary of the **Challenger disaster**. Many important lessons were learned from this tragedy. We saw Richard Feynman help find the cause. One small way that the anniversary was etched into computing history was with the gesture from Eric Cotton by setting the clock preferences icon in the Amiga OS to the time of the explosion. This time on the clock was from the initial reports, later the actual time was reported by NASA.

Benj Edwards @benjedwards · 20. Jan.

In this upcoming era of uncertainty, it's important to know that this stance applies to all threats to digital data technologizer.com/2012/01/23/why...

If you love software, buy it, use it, and reward the people who make it. I do it all the time, and I support the industry's right to make money from its products. But don't be afraid to stand up for your cultural rights. If you see strict DRM and copy protection that threatens the preservation of history, fight it: copy the work, keep it safe, and eventually share it so it never disappears.

Some people may think ill of your archival efforts now, but they're on the wrong side of history: no one living 500 years from now will judge your infringing deeds harshly when they can load up an ancient program and see it for themselves.

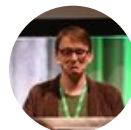

Benj Edwards is a historian and freelance journalist

On Jan 10, 2017, at 10:37 AM, Nevin Brackett-Rozinsky <[nevin.brackettrozinsky at gmail.com](mailto:nevin.brackettrozinsky@gmail.com)> wrote:
> Congratulations Ted, and best of luck to you Chris in your future endeavors!

Thanks Nevin!

One thing that I don't think is fully appreciated by the community: Ted has been one of the quiet but incredible masterminds behind Swift (and Clang, and the Clang Static Analyzer) for many years. His approach and modesty has led many to misunderstand the fact that he has actually been running the Swift team for quite some time (misattributing it to me). While I'm super happy to continue to participate in the ongoing evolution and design of Swift, I'm clearly outmatched by the members of the Apple Swift team, and by Ted's leadership of the team. This is the time for me to graciously hand things over to folks who are far more qualified than me. Swift has an incredible future ahead of it, and I'm really thrilled to be small part of the force that helps guide its direction going forward.

-Chris

"It's never easy to lose such a vital, irreplaceable member of the family, but this is downright heartbreaking. Carrie was one-of-a-kind who belonged to us all- whether she liked it or not. She was OUR Princess, damn it, & the actress who played her blurred into one gorgeous, fiercely independent & ferociously funny, take-charge woman who took our collective breath away. Determined & tough, but with a vulnerability that made you root for her & want her to succeed & be happy. She played such a crucial role in my professional & personal life, & both would have been far emptier without her. I am grateful for the laughter, the wisdom, the kindness & even the bratty, self-indulgent crap my beloved space-twin gave me through the years. Thanks Carrie. I love you, mh"

Talks that changed the way I think about programming opowell.com/post/talks-tha...

The best teacher I had in graduate school spent the whole semester destroying any beliefs we had about computing. He was a real iconoclast. He happened to be a genius, so we took it. At the end of the course, we were free because we didn't believe in anything. We had to learn everything, but then he destroyed it. He wanted us to understand what had been done, but he didn't want us to believe in it.

This is actually quite clever. Wasn't it Python that had the motto: "life is better without braces"? We shouldn't stop thinking about basics

```
public class Permuter
{
    private static void
    if (n == 0)
        System.out.p
    else
        for (int i =
            permute(
                swap(a,
    private static void
    char saved = a[i
    a[i] = a[j]
    a[j] = saved
```

Ministry Of GraveDev @UdellGames

Use whatever brace style you prefer.

But not this....

A three-panel comic strip. Panel 1: A knight in full plate armor with a red plume on his helmet is mounted on a white horse and holds a sword with a red and white striped blade. The text above him reads "YOU HAVE C". Panel 2: The knight is shown from the waist up, holding the sword. The text above him reads "YOU HAVE A LIBRARY FOR A CASTLE & A LIBRARY FOR THE PRINCESS - CHARGE!". A small castle with a red flag is visible in the background. Panel 3: The knight is shown from the waist up, holding the sword. The text above him reads "YOU RESCUE THE PRINCESS HER DOG, HER ENTIRE WARDROBE & EVERYTHING SHE HAS EVER EATEN... FUCK - DID I FORGET A NULL-TERMINATOR?". A small princess with blonde hair and a crown is visible in the background.

Things native English speakers know, but don't know we know:

adjectives in English absolutely have to be in this order: opinion-size-age-shape-colour-origin-material-purpose Noun. So you can have a lovely little old rectangular green French silver whittling knife. But if you mess with that word order in the slightest you'll sound like a maniac. It's an odd thing that every English speaker uses that list, but almost none of us could write it out. And as size comes before colour, green great dragons can't exist.

Calamity 🎃-Warui @oleivarrudi · 22. Juli 2016

A damning 1986 review of the revolutionary NES control pad

There is no way the hardware's controllers can be called joysticks. In fact, they don't even resemble the old Intellivision disc controllers. In a space just 5 inches by 2 inches, Nintendo managed to squeeze in two tiny fire buttons, the game-start switch, game-option button and a controller that is only $\frac{3}{4}$ of an inch long and wide. Since the controller is shaped like a cross, it is virtually impossible to get any on-screen object to move diagonally. This is a major handicap to an otherwise OK system. The fact that Nintendo went to a non-standard pin shape for the controller eliminates the possibility of using an Atari-type joystick. The only saving grace is that if Nintendo sells enough units perhaps a company like Wico will come in and correct this major flaw.

Sven Mertens @SvenMertens1 · 8. Juli 2016

Finally my “uint23”-typos can have a true purpose:

```
int main(int c, char *v[])  
{  
    struct {  
        unsigned long x : 33;  
    } s;  
    typedef typeof(s.x) uint33;  
    uint33 y = -1;  
    printf("%lu\n", (unsigned long)y);  
    uint33 t[3] = { 0x100000000 };  
    t[1] = t[0] + 1;  
    t[2] = t[0] + t[1];  
    for (int i = 0; i<3; i++)  
        printf("%0lx\n", (unsigned long)t[i]);  
}
```

unsigned void * @volatile_void

Little-known fact: GCC lets you define a 33-bit integer type
